## **EXECUTIVE SUMMARY**

Certified Environmental Services, Inc. (CES) was retained by Robert H. Law, Inc. (RH Law), an excavating and grading contractor, to provide environmental support services related to the removal of Polychlorinated Biphenyls (PCB) contaminated topsoil that was inadvertently used at the Coyne Science Center located at the LeMoyne College campus located at 1419 Salt Springs Road in the City of Syracuse, Onondaga County, New York. In September 2012, approximately 4,000 cubic yards of top soil that was obtained from various off-site locations and was staged at RH Law's facility located at 6883 Schyler Road in East Syracuse, New York was found to be contaminated with PCBs, specifically Arochlor 1248. As a result, the New York State Department of Environmental Conservation (NYSDEC) assigned spill number 12-07324 to the RH Law site. Unfortunately, prior to the discovery of the PCB contamination, a portion of the soil had been distributed to other sites, including Lemoyne College.

In order to determine whether or not any of the PCB contaminated soil was distributed to the LeMoyne College site, sixty-six (66) soil samples were collected, from an approximate twenty foot (20') grid layout of the subject area in late April/May 2013. Review of the completed analytical results indicated the presence of PCBs, specifically Arochlor 1248, in concentrations which exceed the NYSDEC DER-10 5.4 limits for restricted use of one parts per million (1 ppm), for unrestricted use of 0.1 ppm, as well as the NYSDEC CP-51 soil cleanup objective for Non-BCP sites of 1 ppm for surface soils and 10 ppm for subsurface soils. Concentrations of Arochlor 1248 ranged from 1.1 to 134 ppm. Please refer to CES's Letter Report to the NYSDEC *RH Law, Inc. - Spill #12-07324 Summary of Analytical Results Lemoyne College - Coyne Science Center Site* dated May 29, 2013.

In an effort to eventually obtain closure following the cleanup of the PCB contaminated soil, NYSDEC Spill # 1303520 was assigned to the LeMoyne College Coyne Science Center site, to differentiate this site from the RH Law facility site in which another spill number is assigned to. In May 2013, RH Law removed a total of approximately 793 tons of non-hazardous (less than 50 ppm) PCB contaminated topsoil from the site that was disposed of at the Seneca Meadows landfill facility. There are a few areas of PCB contaminated soil that still remains in place on-site as well as a stock pile of PCB contaminated soil that is considered to be hazardous for disposal purposes (greater than 50 ppm). The removal of this remaining PCB contaminated soil is pending a removal/disposal plan.

CES personnel provided environmental sampling and analysis services for this portion of the topsoil removal project. A total of eleven (11) composite soil samples were collected from the sub-

soil/gravel following the removal of the PCB contaminated topsoil and air samples were collected during each day of excavation activities. The soil and air samples were analyzed for PCBs. Results indicated that the soil samples were either non-detect for PCB or below one parts per million (1 ppm) with the exception of two (2) of the samples which were found to be just over 1 ppm. There were no PCBs detected above laboratory detection limits in any of the five (5) air samples collected.

## **1.0 PROJECT HISTORY**

In September 2012, CES sampled and analyzed approximately 4,000 cubic yards of top soil staged at RH Law's facility located at 6883 Schyler Road in East Syracuse, New York. The soil had been collected by RH Law from several off-site local source locations within Onondaga County. PCB concentrations, specifically Arochlor 1248, were found in several of the samples, ranging from 0.028 to 16 parts per million (ppm). As a result, the NYSDEC assigned spill number 12-07324 to the RH Law site. Prior to the sampling and analysis, a portion of the soil had been distributed to other sites, including Lemoyne College.

Specifically, the topsoil of concern was used at the Coyne Science Center courtyard area located at Lemoyne College, 1419 Salt Springs Road, Syracuse, New York 13214. The area was finished as a grass courtyard area. In order to determine whether the soil at any of this site was impacted by PCB contamination, CES collected and analyzed soil samples, on behalf of RH Law, of the top soil in question, in general accordance with the DEC-approved sampling plan proposed by CES and dated April 19, 2013. Sample collection occurred on April 29, 30, and May 1, 2013.

A total of sixty-six (66) samples were collected, from an approximate twenty foot (20') grid layout of the subject area. Review of the completed analytical results indicated the presence of PCBs, specifically Arochlor 1248, in concentrations which exceed the NYSDEC DER-10 5.4 limits for restricted use of one part per million (1 ppm), for unrestricted use of 0.1 ppm, as well as the NYSDEC CP-51 soil cleanup objective for Non-BCP sites of 1 ppm for surface soils and 10 ppm for subsurface soils. Concentrations of Arochlor 1248 ranged from 1.1 to 134 ppm. Please refer to CES's Letter Report to the NYSDEC *RH Law, Inc. - Spill #12-07324 Summary of Analytical Results Lemoyne College - Coyne Science Center Site* dated May 29, 2013.

In an effort to eventually obtain closure following the cleanup of the PCB contaminated soil,

NYSDEC Spill # 1303520 was assigned to the LeMoyne Coyne Science Center site, to differentiate this site from the RH Law facility site in which another spill number is assigned to.

## **2.0 SCOPE OF WORK/FIELD ACTIVITIES**

The soil samples collected by CES on April 29, 30 and May1, 2013 were submitted to CES's laboratory for rush PCB analysis due to the fact that RH Law was retained by LeMoyne College to install a temporary gravel access road through a portion of the subject topsoil for a construction project that was to begin in mid-May. As previously noted, PCB contamination was identified in the top soil, therefore the soil was scheduled for removal. Specifically, the soil within the area of the temporary access road was scheduled to be removed first due to the time constraints of the scheduled construction project. However, due to concerns related to the laboratory extraction methods and varying results with a split laboratory, the final analytical results for some of the samples were delayed. Some of the soil was identified to be greater than 50 ppm, which would classify those soils as hazardous, with the soil tested to be between 1 and 50 ppm being classified as non-hazardous for disposal purposes. RH Law retained the services of Riccelli Enterprises, Inc. to transport and dispose of the non-hazardous soil to Seneca Meadows, Inc. landfill facility located in Waterloo, New York. Preliminary results were provided to Seneca Meadows, Inc. with the understanding that the areas that were identified to greater than 50 ppm would not be transported to their facility, an approach that was accepted by Seneca Meadows, Inc. See Appendix D for the Seneca Meadows, Inc./ RH Law correspondence.

RH Law personnel began removal of the PCB contaminated topsoil on May 13, 2013 and temporarily stocked piled the soil within the subject area until the landfill accepted the soil and Riccelli Enterprises, Inc.'s trucks were scheduled for transport of the soil on May 14, 2013. The soil was removed from the furthest area located in the courtyard area of the Coyne Science Center identified as the K, L, M, N and O grid areas. Unfortunately, the soil in these specific areas was preliminarily identified as either being less than 50 ppm or some of the results were pending, however, while the soil was being removed final analytical results were provided, with some of the soil in this area actually being identified as greater than 50 ppm. As a result, the soil from this courtyard area (K through O) was not transported to Seneca Meadows and was either staged on and covered with polyethylene sheeting or left in place, pending a different disposal approach. Please note that the soil within the soil pile from this area is actually a mix of hazardous and non-hazardous soil.

RH Law personnel continued to remove the topsoil along the access road areas first, with the rest of these areas being less than 50 ppm. The soil was transported by Riccelli Enterprises, Inc. to Seneca Meadows. The topsoil along the access road areas was removed on May 13 and 14, 2013. Following the removal of the topsoil, CES personnel collected representative soil samples from the sub-soil/gravel that remained for laboratory analysis for PCBs.

Following the completion of the temporary access road, RH Law personnel resumed the removal of the remainder of the PCB contaminated topsoil on May 20, 2013. As with the soil in the access road areas, the soil that was determined to be non-hazardous was removed, transported and disposed of at the Seneca Meadows landfill. The topsoil removal was completed on May 22, 2013. The overall depth of the topsoil that was removed ranged from six to eighteen inches (6-18"). As with the access road areas, CES personnel collected representative soil samples from the sub-soil/gravel that remained following the topsoil removal for laboratory analysis for PCBs. The results of this sampling and analysis is discussed in Section 3.

In summary the following grid areas were removed and disposed of at Seneca Meadows as non-hazardous waste (less than 50 ppm):

- |       |         |       |         |         |
|-------|---------|-------|---------|---------|
| • A-1 | • B-5   | • D-3 | • E/F-6 | • G-4   |
| • A-2 | • C-1   | • D-4 | • F-0   | • G-5   |
| • A-3 | • C-2   | • D-5 | • F-1   | • G/H-6 |
| • A-4 | • C-3   | • E-0 | • F-2   | • H-2/3 |
| • A-5 | • C-4   | • E-1 | • F-3   | • H-4/5 |
| • B-1 | • C-5   | • E-2 | • F-4   | • I-2   |
| • B-2 | • C/D-6 | • E-3 | • F-5   | • I-3   |
| • B-3 | • D-1   | • E-4 | • G-2   | • J-2   |
| • B-4 | • D-2   | • E-5 | • G-3   |         |

In summary the following grid areas (mix of areas that were tested to be above and below 50 ppm) were removed and have been staged on and covered with polyethylene sheeting pending a disposal plan:

- |                 |                 |
|-----------------|-----------------|
| • K-1           | • L-4 (partial) |
| • K-2 (partial) | • M-1           |
| • K-4 (partial) | • M-2           |
| • L-1           | • M-3           |
| • L-2           | • N-1           |
| • L-3           | • N-2           |

- N-3 (partial)
- O-1
- O-2
- O-3 (partial)

In summary, the following areas have not been removed and the PCB contaminated soil remains in place:

- A/B-6
- G-0
- K-3
- K-2 (partial)
- L-4 (partial)
- M-4
- N-3 (partial)
- N/O-4
- O-3 (partial)

A site map depicting the various grid areas has been provided as Figure 2 of Appendix A. The areas in which the topsoil was left in place were considered to be hazardous waste (greater than 50 ppm). However, there was a question related to the acceptable approach for adding the various PCB Arochlors, specifically how to address the Arochlors that were not detected above laboratory detection limits, for the purposes of whether or not soil was determined to be over or under 50 ppm. Originally in the absence of a clear acceptable approach, all of the Arochlors concentrations were being added, regardless of whether or not they were actually being detected by the laboratory, i.e. if the laboratory reported less than (<) 5.0, then 4.9 was added into the total. CES proposed the approach to only add up the detected Arochlor(s) based on several factors in a letter the NYSDEC dated May 28, 2013. The NYSDEC approved the approach of only adding detected Arochlor(s). As a result, some of the areas that were originally added to be above 50 ppm changed to be less than 50 ppm when only adding the detected Arochlor(s). For the soil areas that remain in place, areas A/B-6, G-0 and K-3 were originally considered to be greater than 50 ppm, but when only adding the detected Arochlor, these areas are less than 50 ppm. For the rest of the areas in which soil remains in place, the soil is still considered to be greater than 50 ppm.

In addition to the soil closure samples, CES personnel also collected air samples in the vicinity of the excavation for PCB analysis. Air samples were collected on each day of excavation activities, May 13, 14, 20, 21 and 22, 2013. Air samples were submitted to Galson Laboratories for PCB

laboratory analysis. The results of this air sampling and analysis is discussed in Section 4.

### **3.0 LABORATORY ANALYSIS - SUB-SOIL SAMPLES**

On May 14 and 22, 2013, CES personnel provided an experienced environmental professional to collect composite soil samples from the sub-soil/gravel that remains on-site following the removal of the PCB contaminated topsoil as discussed in Section 2. A total of eleven (11) composite samples were collected and submitted to CES's laboratory for PCB analysis via USEPA Method 8082. CES is a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) approved laboratory (ELAP #11246).

A summary table of the laboratory results has been provided as Table 1. The laboratory analytical reports have been provided as Appendix A. Review of the laboratory analytical results indicated that PCBs were either not detected in concentrations above laboratory detection limits or were below 1 ppm for all of the samples collected with two (2) exceptions. The composite soil samples collected from the East Portion of the Access Road and A-4&5 & B-4&5 were found to contain 1.6 and 1.7 ppm PCBs (specifically Arochlor 1248), respectively.

### **4.0 LABORATORY ANALYSIS - AIR SAMPLES**

On May 13, 14, 20, 21 and 22, 2013, CES personnel collected air samples generally during excavation activities performed by RH Law personnel. The PCB air samples were collected utilizing a battery operated pump placed in the general vicinity of the excavation area. The air samples were submitted to Galson Laboratories located at 6601 Kirkville Road, East Syracuse, New York for PCB analysis via NIOSH Method 5503.

Review of the analytical results indicated that PCBs were not detected in concentrations above laboratory detection limits for all five (5) of the air samples collected. The individual analytical laboratory reports has been provided as Appendix B.

### **5.0 SOIL DISPOSAL**

As noted in Section 2, the PCB contaminated soil that was determined to be less than 50 ppm (non-

hazardous) was transported by Riccelli Enterprises, Inc. to the Seneca Meadows, Inc. landfill located at 1786 Salcman Road, Waterloo, New York 13165. A total of 792.76 tons of non-hazardous PCB contaminated soil was disposed of on May 14, 20, 21 and 22, 2013. A copy of the waste manifests and landfill facility weigh tickets has been provided as Appendix C with a summary table of the soil disposal weigh tickets being presented as Table 2.

Any questions regarding the information provided in this report should be directed to the Technical Services Department at Certified Environmental Services, Inc. (CES).

### Sample Receiving Check List

Client Name: Robert H. Law

Batch Number: \_\_\_\_\_

Yes

No

If No Explain:

1. Proper Full and Complete Documentation:

☒☐

2. Appropriate Sample Containers:

☒☐

3. Adequate Sample Volume:

☒☐

4. Hold Time(OK):

☒☐

5. Proper sample labeling:

☒☐

6. Sample Temperature:

☐☒

no ice

7. Samples received in good condition  
And with proper/adequate preservation:

☒☐

Additional Comments: \_\_\_\_\_

\_\_\_\_\_

Client Correspondence: \_\_\_\_\_

\_\_\_\_\_

This checklist is to be attached to the Original Chain of Custody.

Dear Ms. Copeland:

Enclosed are the analytical results for the samples received by our laboratory on May 13, 2013. All test results meet the quality control requirements of AIHA and NELAC unless otherwise stated in this report. All samples on the chain of custody were received in good condition unless otherwise noted.

Results in this report are based on the sampling data provided by the client and refer only to the samples as they were received at the laboratory. Unless otherwise requested, all samples will be discarded 14 days from the date of this report.

Current Scopes of Accreditation can be viewed at [www.galsonlabs.com](http://www.galsonlabs.com) in the accreditations section under the "about Galson" tab.

Please contact Amanda Frateschi at (888) 432-5227, if you would like any additional information regarding this report.

Thank you for using Galson Laboratories.

Sincerely,

Galson Laboratories

Mary G. Unangst  
Laboratory Director

Unless otherwise noted below, all quality control results associated with the samples were within established control limits.

Unrounded results are carried through the calculations that yield the final result and the final result is rounded to the number of significant figures appropriate to the accuracy of the analytical method. Please note that results appearing in the columns preceeding the final result column may have been rounded in order to fit the report format and therefore, if carried through the calculations, may not yield an identical final result to the one reported.

The stated LOQs for each analyte represent the demonstrated LOQ concentrations prior to correction for desorption efficiency (if applicable).

Unless otherwise noted below, reported results have not been blank corrected for any field blank or method blank.

L290930 (Report ID: 782718):

PCB Aroclor 1016 - Total ug corrected for a desorption efficiency of 89%.

Date Analyzed: 24-MAY-13

Account No.: 10437  
Login No. : L291477

Unless otherwise noted below, all quality control results associated with the samples were within established control limits.

Unrounded results are carried through the calculations that yield the final result and the final result is rounded to the number of significant figures appropriate to the accuracy of the analytical method. Please note that results appearing in the columns preceeding the final result column may have been rounded in order to fit the report format and therefore, if carried through the calculations, may not yield an identical final result to the one reported.

The stated LOQs for each analyte represent the demonstrated LOQ concentrations prior to correction for desorption efficiency (if applicable).

Unless otherwise noted below, reported results have not been blank corrected for any field blank or method blank.

## L291477 (Report ID: 784197):

PCB Aroclor 1016 - Total ug corrected for a desorption efficiency of 89%.  
PCB Aroclor 1221 - Total ug corrected for a desorption efficiency of 89%.  
PCB Aroclor 1232 - Total ug corrected for a desorption efficiency of 89%.  
PCB Aroclor 1242 - Total ug corrected for a desorption efficiency of 89%.  
PCB Aroclor 1248 - Total ug corrected for a desorption efficiency of 89%.  
PCB Aroclor 1254 - Total ug corrected for a desorption efficiency of 89%.  
PCB Aroclor 1260 - Total ug corrected for a desorption efficiency of 89%.  
PCB Aroclor 1268 - Total ug corrected for a desorption efficiency of 89%.  
SOPs: GC-SOP-18(9)

## L291477-1 (Report ID: 784197):

The sample was received still attached to the tubing. The effect on the sample results is unknown.

Dear Ms. Copeland:

Enclosed are the analytical results for the samples received by our laboratory on May 21, 2013. All test results meet the quality control requirements of AIHA and NELAC unless otherwise stated in this report. All samples on the chain of custody were received in good condition unless otherwise noted.

Results in this report are based on the sampling data provided by the client and refer only to the samples as they were received at the laboratory. Unless otherwise requested, all samples will be discarded 14 days from the date of this report.

Current Scopes of Accreditation can be viewed at [www.galsonlabs.com](http://www.galsonlabs.com) in the accreditations section under the "about Galson" tab.

Please contact Amanda Frateschi at (888) 432-5227, if you would like any additional information regarding this report.

Thank you for using Galson Laboratories.

Sincerely,

Galson Laboratories

Mary G. Unangst  
Laboratory Director

PCB Aroclor 1260 - Total ug corrected for a desorption efficiency of 89%.  
PCB Aroclor 1268 - Total ug corrected for a desorption efficiency of 89%.

SOPs: GC-SOP-18(9)

Surrogate recoveries were outside the control limits of 61.3-192% for the Blank Spike (25%) and Blank Spike Duplicate (32.5%).

Surrogate recovery was also outside the control limits for the sample (56.6%).

Both spikes recovered at 114% for Aroclor 1232, which is well within acceptance limits of 69.4% to 142%. We suspect that the surrogate non-conformances may be due to a spiking/syringe problem, but results for the sample may be biased low.

Re: Topsoil containing PCB's

It is Robert H. Law, Inc.'s desire to ship nonhazardous topsoil containing PCB's with less than 50ppm to the Seneca Meadows facility. We have mapped out the area we sampled to determine the extent and level of PCB contamination. A copy of that map is attached. We will identify and segregate out all material that tested higher than 50ppm to make sure it does not get shipped to your facility. We have contracted with CES, Inc. to do all of our sampling, monitoring, and testing to assure we are in compliance with all governing authorities. If you have and questions or concerns please feel free contact me at any time.

**Waste Characterization:**

Name of waste: <u>PCB CONTAMINATED TOPSOIL</u>	Description of waste: <u>SAME</u>
Process that generated waste: <u>UNKNOWN</u>	

Does this facility generate any hazardous waste?

☐ YES☒ NO

If hazardous wastes are generated, does management feel that adequate controls are in place to control/separate waste streams? (if answer is no, a detailed explanation must be attached)

☐ YES☐ NO

## Certification of Representative Sample

Seneca Meadows File Number: \_\_\_\_\_

Generator's name: <u>WOODBINE GROUP</u>	
Waste name: <u>PCB'S</u>	
Sampler's name: <u>CES, INC - MIKKI COPELAND</u>	
Sample date: <u>4/29, 4/30, &amp; 5/1/13</u>	Sample time: <u>7 AM - 4:30 PM EACH DAY</u>

**NOTE: This sample must be received by the lab within 24 hours**

It is critical that the testing laboratory receive a representative sample of the waste stream that you intend to dispose of at Seneca Meadows Landfill. Please follow the instructions very carefully.

**Sample Collection Process:**

- Must be done by your consultant or selected laboratory representative
- Sample must be kept cold (placed in ice pack)
- Amount of samples required is one (1) container. However, we may require a semi-annual testing of the waste stream sample if the quantity exceeds 5,000 (thousand) tons per year

**Samples required – One time only approvals:**

1 – 200 tons	One (1) sample required
201 – 500 tons	Two (2) samples required
501 – 1,000 tons	Three (3) samples required
1,001 – 2,000 tons	Four (4) samples required
Over 2,000 tons	Determined by Seneca Meadows

**Lab Selection:****We will have our waste stream analysis completed by:**

Laboratory Name: <u>Certified Environmental Services, Inc.</u>			
Mailing Address: <u>7280 Caswell St.</u>	City: <u>N. Syracuse</u>	State: <u>NY</u>	Zip: <u>13212</u>
Contact Person: <u>Nicole Copeland</u>	Title: <u>Technical Services Manager</u>		
Phone: <u>315-478-2374</u>	Fax/E-mail: <u>ncopeland@certifiedenvironmental.com</u>		

**Sample Certification:**

I hereby certify that I personally collected a representative sample of waste stream at the location, time and date as listed above.

Signature:  Date: 5/9/13Laboratory: Certified Environmental Services, Inc.

## General Information

Seneca Meadows File Number: \_\_\_\_\_

## Physical Characteristic:

☒ Solid ☐ Sludge

Minimum % of solids \_\_\_\_\_ for waste stream

NOTE: Acceptable level of solids must exceed 20% and have no free liquids

## Odor:

☒ None ☐ Mild ☐ Strong

## Transportation:

☐ Roll Off ☐ Trailer ☐ Packer  
☐ Other \_\_\_\_\_

NOTE: No drums are acceptable

☐ One time only☐ On going

Approximate amount: \_\_\_\_\_ tons

Amount of monthly \_\_\_\_\_ tons

What is the maximum tonnage for any given day: \_\_\_\_\_ tons

Briefly describe any special handling that could be required for this waste item:  
(dust, protective clothing...)

WEAR GLOVES, BOOTS, DON'T HANDLE w/ BARE HANDS

## Generators certification to Seneca Meadows landfill

(Please Initial)

I / we hereby certify that all of the information that we have presented to Seneca Meadows, Inc. on this form or any attachments is an accurate representation of our waste stream.

RW

I / we hereby certify that the laboratory can contact Seneca Meadows, Inc. directly to discuss this waste stream.

RW

I / we hereby certify that the waste stream that we are applying for disposal at Seneca Meadows, Inc. is not a listed or known hazardous waste. In addition, none of the components of the process, or any residue generated are known to be a hazardous, radioactive, or contain regulated concentrate of polychlorinated biphenyles (PCBs) waste streams.

I / we hereby agree that any changes in this waste stream, either in process method, changes of any of the components, or laboratory data received, that we will notify Seneca Meadows, Inc. in writing within 24 hours of our findings (Fax is the preferred method of notification).

SUBJECT: APPROVAL CONDITIONS FOR PCB CONTAMINATED TOP SOIL

Dear: Norman Swanson

Seneca Meadows, Inc. (SMI) has reviewed your profile of the above referenced material and has determined it to be suitable for acceptance at our 6 NYCRR Part 360 Solid Waste Management Facility. This material is approved by SMI in accordance with the following:

- SMI will only accept waste that is non-hazardous and has a PCB contamination level less than 50 ppm.
- Material associated with sample I.D. G-0 and A/B-6 will not be acceptable due to the PCB contamination level greater than 50 ppm.
- Material associated with sample I.D. N-1, N-2, N-3, O-1, O-2, O-3, M-4, and N/O-4 will not be acceptable due to the lack of testing conducted on these locations.
- Unacceptable material must be segregated from the acceptable material and disposed of at another location that can accept this type of waste.

If you have any questions, please feel free to contact me via phone or e-mail ([dpannucci@iesi.com](mailto:dpannucci@iesi.com)).

Sincerely,

SENECA MEADOWS, INC.

David Pannucci  
Environmental Engineer
